Connecting Offices

Switch Technology Ltd has the expertise to design and install the most cost-efficient way of connecting all your offices worldwide whilst ensuring the utmost security and resilience. Global Headquarters, National headquarters, Branch offices, Buildings, Remote workers & Customers can all communicate together, as if they were at the next desk.

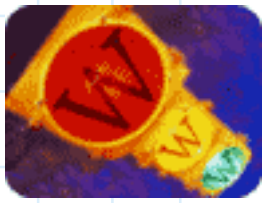
Virtual Private Networks

A highly effective and efficient method of creating site to site connectivity, remote client access, home working and mobile access.
Using the most secure devices on the market such as Cisco, we can design a solution incorporating the highest levels of encryption available for non-military environments.

Network Security

Whether your are utilising the internet for your communications or using fixed point to point circuits security is vital. Switch Technology will ensure that your data is kept secure.

Websites



From a simple website to supply information about your company or a fully loaded e-commerce driven website Switch Technology can create the essential web presence you need.

Backup your Data

Our fully automated off site backup service is just one way we can protect your data to the highest level. Without any physical hardware or transportation costs we can backup your data to a secure off site host. You have control of restoring files and can view the status of every backup from your desk.

Email

Stay in touch and stay informed. Access your email and files from anywhere. Use the internet to access your office desktop or your email as if you were in the office. Mobile solutions enable you to get access wherever you happen to be.

Lines of Communication

Switch Technology is an authorised reseller of ADSL, SDSL and fixed lines. With you, we can select the most cost-effective data connection to give your company the fastest connection speeds at the best price.

Firewall

Protecting your network is essential. Switch Technology utilises leading edge technology and industry standard devices such as Cisco routers and firewalls. Solutions are tailored to the specific requirements whether it is a small home-office or large corporate headquarters.

Healthcare

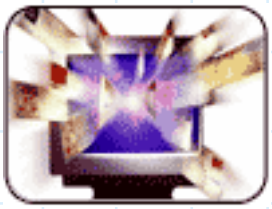
Are you getting the best out of your systems? Are they operating as fast as they should? Are they secure? Are they adequately protected? With our network monitoring and troubleshooting tools we can obtainin-depth analysis of how ell your network is running. We can identify problems and areas that need addressing.

Anti-Virus

One of the biggest problems to businesses these days are the number of viruses, worms and trojans that spread throughout the internet and bring productivity to a standstill.

Switch Technology works with several of the leading Anti-Virus software manufacturers to bring the ideal solution to your company's requirements.

Detecting Attacks And Intrusion Attempts



Your systems have firewalls to prevent unauthorised access how will you know if you are being attacked? Monitoring your intrusion detection systems is essential to ensure they are working properly and alert you to any rogue traffic into your network.

Voice

Voice over IP is a strategy that could reduce your voice communication overheads and charges. We can design and install a network that will combine both voice and data communication saving time and expense for your organisation.

Wireless Security

Implementing a truly secure wireless network is achievable to add additional mobility. Authentication and encryption ensure high levels of security whilst maintaining the flexibility and freedom to empower your workforce and release them from the expected restrictions of office working.
